

Flat-Spec IR Contract

The model emits semantic structure once; compact tables and state keep token cost low while preserving values.

Compact table example

All source cells preserved; renderer chooses presentation.

Day	Condition	High
Mon	Cloudy	28°
Tue	Rain	27°
Wed	Clear	30°

Below the table, two callouts are shown:

- A light blue oval containing `Table.props.columns`.
- A light green oval containing `statePath=/forecast`.

Supported semantic components

Small catalog with rendererer-owned templates.
